FOR IMMEDIATE RELEASE

Furusato Industries, Ltd.

**Furusato Acquires New JIS Mark Certificate for Full Braces,
First Certified Entity in Building Construction Industry**

Kinki area plants of Furusato Industries, Ltd. acquired the new JIS mark certificate from the General Building Research Corporation of Japan, the accredited certification body. We are the second certified entity in Japan and the second one in the building construction industry since the new JIS mark scheme launched.

The new JIS approvals were awarded for construction turnbuckle (JIS A 5540) and construction turnbuckle bolt (JIS A 5542). As the Kinki group plants, Shiga and Toyama plants acquired new JIS mark at the same time, which is a model case of the new JIS mark system, a package approval for several divisions under a business entity.

Going forward, we plan to acquire the new JIS mark certificate for the East group plants (Saitama, Fuji, and Niigata), North group plant (Utsunomiya and Sendai), and West group plant (Kurume, Hiroshima, and Kagawa).
